

Yaskawa India conducted a seminar at SKH Metals Ltd., Manesar on 9<sup>th</sup> June 2018 for product awareness.

In the presentation, we explained our company profile and our product line-up like our newly launched VFD “GA700”, special purpose drives “G7” and low harmonics regeneration solutions using U1000/D1000/R1000.

Total 10 members from SKH attended the seminar. YIND explained them drawbacks of harmonics and how Yaskawa can provide the solutions to overcome harmonics. We also presented advantages, installation benefits, special features and case stories of “U1000” with different applications and the benefits to the customer.

Customer showed noticeable interest in “U1000” because of its regenerative concept, low surge voltage at motor terminal, low bearing current and its unique technology as they are very concerned about total harmonic distortion and energy saving in the plant.

We believe that this seminar will give customer a better insight about our product and open new doors of business opportunity for Yaskawa India in the future.
